

1 - Arquitetura da solução

I want to rebuild the website goosegamestudio.com.

The e-commerce functionality is NOT part of this project because purchases are handled by a separate Shopify store.

Requirements:

- Next.js App Router
- React
- TypeScript
- Tailwind CSS
- Docker
- Responsive design
- Fast loading
- Static generation whenever possible

2 - Gerar o projeto base

Complete initial setup for a production-ready Next.js 15 project.

Requirements:

- App Router
 - TypeScript
 - Tailwind CSS
 - ESLint
 - Prettier
 - Absolute imports
 - Responsive layout
 - SEO ready
 - Docker support
 - Docker Compose support
-

3 - Estrutura das páginas

Pages:

/

/games

/games/[slug]

/about

/contact

4 - Sistema de jogos

Fields:

- id
- slug
- name
- shortDescription
- longDescription
- playerCount
- ageRange
- gameDuration
- gameType
- releaseStatus
- heroImage
- galleryImages
- buyLink

Created:

- TypeScript interfaces
- Mock data
- Repositories

- Server Components

The content must be consumed from local JSON files.

5 - Página inicial

Sections:

1. Hero section
2. Featured games
3. About the studio
4. Design philosophy
5. Call to action
6. Link to Shopify store
7. Contact section

Focus on premium board game branding.

Use Tailwind CSS.

6 - Catálogo de jogos

Requirements:

- Grid layout
- Card design
- Image optimization
- Filtering
- Search bar
- Pagination
- SEO metadata

Use Next.js Server Components.

7 - Página individual de jogo

Requirements:

- Hero image
- Gallery
- Full description
- Game specifications
- Buy button linking to Shopify
- Related games
- SEO metadata
- OpenGraph metadata

Use generateMetadata().

8 - Corrigir o problema do carrossel da equipa

Requirements:

- Never allow image/text desynchronisation.
- Use a single source of truth state.
- TypeScript.
- Accessibility support.
- Keyboard navigation.
- Swipe support.
- Framer Motion animations.

The implementation guarantees synchronization.

9 - SEO professional

Implement SEO best practices in Next.js.

Requirements:

- Metadata API
 - Open Graph
 - Twitter Cards
 - Sitemap generation
 - Robots.txt
 - Structured Data
 - JSON-LD for products
 - Canonical URLs
-

10 - Docker

Create a production Docker architecture for this Next.js website.

Requirements:

- Multi-stage Docker build
 - Small final image
 - Security best practices
 - Docker Compose
 - Health checks
 - Environment variables
 - Nginx reverse proxy
-

11 - Administração simplificada

Design a content management approach based on JSON files.

Requirements:

- Non-technical users can edit game information.
- Images stored in public folder.

- Games loaded dynamically.
 - Markdown support.
 - Validation schema with Zod.
-

12 - Segunda fase com Payload CMS

Quando o site já estiver funcional:

Migrate the board game content architecture to Payload CMS.

Requirements:

- Docker support.
 - PostgreSQL.
 - Collections for Games.
 - Collections for Team Members.
 - Collections for News.
 - Media management.
 - SEO support.
-
